The pressure necessary for the extrusion of molten poly-
ethylene through a die is utilized only partially for the
viscous flow within the die. A second portion, termed
the geometric correction, is converted into heat before
the melt enters the die while a third portion, termed the
elastic correction, is transported with the polymer
through the die in the form of elastic energy. A method

glass industry a not inconsiderable change in the
quantities of gas flowing in the furnace channels and
in the upper furnace should be anticipated as a con-
sequence of an unfavorable pattern of furnace pres-
sure. (Enlarged version of a lecture held before the
32nd Symposium on Glass Technology, Freudenstadt,
